

B-OFF DENGUE Joining Forces!!!

Connecting Schools, B-OFF and the Public Health Department

Schools are well known hotspots for the transmission of dengue: Unfortunately it takes a continuous, committed effort to manage the mosquito vector and often vector control is overlooked. Especially when epidemics are not at peak level. Therefore, involving a committed program to stay on the case will make all the difference!

B-OFF SERVICES:

- Positioning mosquito traps in strategic locations to decrease the mosquito population and reduce the transmission of dengue
- Conducting surveillance of the traps to monitor the vector population and provide early warnings of increased risk
- Servicing and conducting repeated site visits to ensure traps are positioned for optimal effectiveness
- Setting up a training by Public Health Officials for parents and staff volunteers to monitor mosquito breeding sites in and around the premises
- Arrange seminars with students or parents to increase awareness about dengue epidemic management
- Facilitating fundraising for mosquito traps, if needed.

Biogents Mosquito Traps

Scientifically
proven

50-100 m²
coverage

Beneficial insects
remained
unharmd

Non-Toxic

Trap does not
attract new
mosquitoes into
premise

Costs

1 durable Biogents trap suitable for surveillance purposes:	16,500
1 Attractant for 2 months:	3,500
Installation Cost and services	FREE
